Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE three MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1, 8 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Roesner(6,147,655).

Claims 1, 8 and 15, figure 1 discloses an antenna(10), a feed structure(26 & 28) and a discontinuity extending towards and away from the feed and being close enough to the feed to couple to the feed as recited.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2821

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-7, 9-14 and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roesner in view of Dettloff(6,570,541).

Claims 2, 9 and 16, Roesner does not disclose a polygonal shape element. Figure 5D of Dettloff discloses using a polygonal element with discontinuities to obtain a desired electromagnetic field pattern.

Claims 3, 10 and 17, scaling the physical size of an antenna element to match a desired wavelength is a well known practice in the antenna art and doing such with the disclosed antenna would be obvious to one of ordinary skill in the art.

Claims 4-5 and 11-12, both references disclose multiple identical discontinuities as recited.

Claims 6-7, 13-14 and 18-19, figure 6 of Dettloff discloses an elliptical shaped antenna as recited for a desired field pattern.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the antenna shapes disclosed in Dettloff for the antenna disclosed in Roesner to obtain desired field characteristics from the antenna as disclosed in Dettloff.
